

Clinical Competence Assessment (CCA) for Canadian Applicants:

Frequently Asked Questions

Registration Fact Sheet

What is a CCA and why is it necessary?

The CCA assesses your nursing knowledge and practice. It is an opportunity for you to demonstrate how your knowledge and practice matches what is expected of registered nurses to deliver safe, competent care. The CCA evaluates your practice against the *Entry-Level Competencies for Registered Nurses in Manitoba*. These are the minimum level of competencies required for entry-level registered nurses to provide safe, competent, compassionate and ethical nursing care in a variety of practice settings. All registered nurses, including new graduates from a Manitoba nursing education program, must have demonstrated that they can meet the entry-level competencies.

CCAs are necessary if you:

- have applied for registration but do not meet the minimum required practice hours;
- have been referred by the Investigation or Discipline Committees: or
- received your entry-level education outside of Canada and are referred as part of the application process.

How do I apply for a CCA?

You must be referred by the College. Once you receive a letter of referral, you should call the telephone number provided to schedule your appointment.

How long is the assessment?

It is completed over a three to five day period.

Where is the assessment done?

Assessments are conducted at the Assessment Centre for Nursing at the College of Nursing at the University of Manitoba Fort Garry Campus in Winnipeg, Manitoba (Canada).

What is the cost of the assessment?

The College charges an assessment fee of \$200 plus GST in order to prepare the referral as well as receive and review the CCA results. This fee is required before the referral is made. The cost of the CCA itself can range from \$1,185 to \$2,200, depending on the reason for the referral. This fee is paid directly to the Assessment Centre. The full cost of the assessment is due at the time you book your appointment.

What areas of nursing are assessed?

You may be asked to complete assessments in any or all of the following areas:

- General Nursing
- Maternal Newborn Nursing
- Child Health Nursing
- Mental Health Nursing

How are these areas assessed?

The assessment is comprised of all or parts of the following:

- · Written Diagnostic Exam
- · Clinical Judgement Scenarios Assessment
- · Chart Review with Development of Nursing Care Plan
- Objective Structured Clinical Examination (OSCE)
- Self-Assessment

What areas of skills and knowledge are assessed?

- · General and/or specialty nursing knowledge
- · Pharmacology and medication administration
- Pathophysiology
- Knowledge of the Canadian healthcare system and current nursing practices
- Basic and advanced clinical skills as well as use of current technology in nursing practice
- Health history and health assessment knowledge and skills
- Clinical judgement and critical thinking skills with evidence based practice
- Therapeutic communication practices
- · Cultural competencies

What is involved in each of the components?

Depending on the reason for your referral, you may not be referred for all components of the CCA. You will be advised at the time you are referred for the assessment which parts of the CCA you will be required to complete.

Written Diagnostic Exam

The written diagnostic exam includes both multiple choice and short answer questions that test general nursing knowledge.

Clinical Judgment Scenarios

This is an interview style assessment that evaluates your ability to make sound clinical judgments in situations that are complex and have no "simple" answers. These situations will assess your ability to think deliberately and critically through a nursing situation, apply essential and relevant knowledge, consider possibilities and options and take reasoned, reflective, and insightful decisions and actions.

Chart Review with Development of Nursing Care Plan

This assessment involves reading a client chart, developing a problem list, prioritizing the problem list and developing a plan of care for the patient.

Objective Structured Clinical Examination (OSCE)

This assessment is conducted in a simulated clinical practice setting, where you will role-play a nurse in response to client/family health situations and demonstrate your abilities to apply knowledge by holistically caring for this client/family. This exercise assesses nurse-client relationships, critical thinking and clinical judgement, health assessment and nursing skills, pharmacology and pathophysiology, and decision making in rapidly changing situations.

Self-Assessment

This provides an opportunity for you to describe how you have met the professional standards during nursing practice.

How do I prepare?

- Go to www.crnm.mb.ca to review the documents entitled Entry Level Competencies for Registered Nurses and Standards of Practice for Registered Nurses;
- Refer to the Canadian Nurses Association website www.cna-aiic.ca to review the CNA Code of Ethics document;
- Review nursing textbooks, published in the last five years, that cover the knowledge and procedures of medical/surgical nursing practice;
- If referred for a focused or specialty assessment, review a current textbook on maternal-newborn health, child health, and/or mental health nursing;
- To familiarize yourself with Canadian health care equipment and supplies that you could be exposed to in your OSCE assessments, refer to the Nursing Picture Dictionary Tutorial at www.englishforhealth.com

How do I prepare?

The CCA looks at entry-level competencies; it does not look at expert levels of nursing practice. Even if you have practised in a highly specialized area, your knowledge and practice is being compared to entry-level competencies. You will likely need to refresh your entry-level knowledge before you take the CCA.

Helpful Resources

- Go to <u>www.crnm.mb.ca</u> to review the documents entitled Entry-Level Competencies for Registered Nurses and Standards of Practice for Registered Nurses
- Refer to the Canadian Nurses Association website <u>www.cna-aiic.ca</u> to review the *Code of Ethics* document
- Review nursing textbooks, published in the last five years, that cover the knowledge and procedures of medical/surgical nursing practice
- If referred for a focused or specialty assessment, review a current textbook on maternal-newborn health, child health, and/or mental health nursing

What happens once the assessment is completed?

Approximately four weeks following the assessment you will be informed of the outcome which will include one of the following:

- Competencies are met. You will be eligible for registration provided all other requirements have been met.
- Gaps in skills and knowledge are found. A course of instruction would be required before you are eligible for RN registration.
- 3. If gaps in knowledge, skill and judgment are too significant, you would not be eligible for registration.
